

**What do you do
after a drain has
been cleaned?**

You can leave it alone and wait until it stops up again; after all, all drains eventually clog, right? Or, you can treat it right away with ProClean® Concentrated Drain Cleaner.

ProClean Concentrated Drain Cleaner is a harmless, economical and environmentally safe product specifically designed to help keep drains free-flowing and prevent build-up from grease, fats and soaps.

Most drain problems start months before you notice them. Grease, soap scum, and cooking oils build up as you use your drains daily. Food, hair particles, and other debris will eventually block the water flow through your drain lines.

The Best Way To Maintain Your Drain!

ProClean Concentrated Drain Cleaner – an exclusive formula — specifically designed to coat the inside of pipes and keep waste from building up and eventually clogging drains. It's the best way to keep clogs from reoccurring.

- Keeps drains free-flowing longer
- Treats the whole plumbing system, all the way down the line — not just the trap
- Specifically formulated to break down long-chain fatty acids — the number one cause of drain clogs
- Concentrated — one gallon makes 64 treatments — that's years of treatments when used monthly as directed
- Commercial strength — available only from professional service technicians
- Safe for the environment — no harsh, toxic chemicals

PROCLEAN[®]

Concentrated Drain Cleaner

Using ProClean

Concentrated Drain Cleaner on a regular basis provides you with a natural biological tool that releases nontoxic bacteria to absorb the grease and organic buildup in your pipes and converts them into harmless by-products; namely, carbon dioxide and water. In addition, a bio-film coats the inside of your drain

pipes and continues to consume the organic wastes through this bacterial action until the waste is gone.

ProClean Concentrated Drain Cleaner contains no solvents, acids or caustic ingredients. A single two-ounce treatment of Drain Cleaner lasts four weeks. During this time, a pleasant and refreshing scent deodorizes your drain

pipes as the bio-film works to remove the waste that is the source of unpleasant odors.

ProClean Concentrated Drain Cleaner will not harm your drains – copper, PVC or iron – regardless of how often it is used. It is safe for all kitchen sinks, bathroom sinks, bathtubs, showers, laundry drains and floor drains.

So don't delay.

The next time you have your drains professionally cleaned by your service technician, be sure to request a bottle of ProClean Concentrated Drain Cleaner and use it frequently as a preventative maintenance aid to keep your drains clear and free flowing.

ProClean Concentrated Drain Cleaner
the solution to keep drains free-flowing throughout your entire house.

Treating your drain as directed with ProClean Concentrated Drain Cleaner will help drains stay clear longer. It's easy-to-use and economical.

Unfortunately, over time, your drain will build up with food, grease, hair and other household waste. Eventually, the drain will flow slow or stop completely.

Your drain is clogged. You call for help from a professional. Your drain is cleaned, as good as new, and that's the way you want to keep it.
